

Viaduc Mantes-La-Jolie

Completed projects

Project type & location

Category: Railway bridges

Type: Bruggen

Function: Railway bridges

Country: France

Location: Mantes-La-Jolie

Tonnage: 4.180

Client(s): SNCF Réseau

General Contractor(s): Bouygues TP

Project start date: 01/03/2020

Project finish date: 31/07/2022

Project specifics

Description:

This viaduct, with a length of 620.95m, is located in Mantes-la-Jolie and is part of an extension of the railway lines from Paris to the west. The viaduct consists of 3 sub-viaducts.

The section exists of 2 vertical caissons with spacers (bridge pieces). The height of the box girders is 3.5m, the total width of the viaduct is 8.4m.

The different sections (box elements) will be manufactured in our workshops in Belgium and transported by truck to the construction site in Mantes-la-Jolie. On the assembly site the sections will be pre-assembled with the bridge parts and then handled on temporary piers next to the final piers. After welding and concreting on the temporary structures, the load transfer to the supporting devices will be carried out.

A 125m long part of the viaduct will be installed above the tracks by SPMTs.
